Reduce Bathroom Water Use With Simple Upgrades

Bathrooms are by far the largest water users in the home, accounting for 60 percent of all indoor water use. A simple mini-make-

over in your bathroom can make a big difference. By installing WaterSense-labeled fixtures, such as a high-efficiency toilet, faucet, and showerhead, you can save about 10,000 gallons of water each year. That's roughly enough water to wash 11 months' worth of laundry. These upgrades not only conserve water but also help lower utility bills, making them a smart and sustainable choice for any household. Learn more at epa.gov/watersense.

Did You Know?

Aquarion's mobile app is now available in both English and Spanish. It makes it easy to use your phone to track your water usage, check account balances and pay your bills. Download the Aquarion mobile app today at aquarionwater.com/mobileapp. Then, simply set your phone's default language to your preferred one.

A Quick Guide to Your Billing Statement

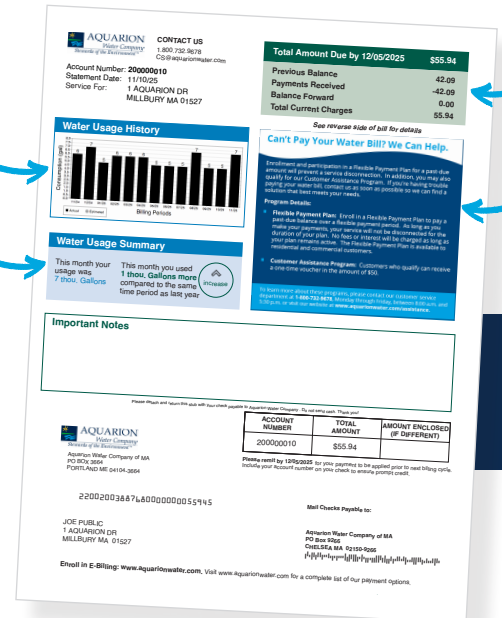

Aquarion's billing statements offer valuable information to help you manage your finances, conserve water, and save time and money.

On the upper left, you'll see a graph showing your water usage over the past 13 months. Below the graph is a comparison of your current usage with the same period last year. Notice any big spikes? They could indicate a possible leak or water waste.

Just to the right, you'll find an information block with helpful information on a variety of topics.

On the upper right is a quick summary of your balance and due date. Flip your bill over for a detailed report of your Aquarion account, including meter readings, payments, recent charges, and more.

Keep the top portion of your bill for your records and use the detachable stub when mailing payments.

Even better, sign up for e-billing to skip stamps and mailing altogether. You'll receive all the same information conveniently every billing period. Enrolling is easy at aquarionwater.com/billing.

Help Recharge Our Water Supplies

Recent rains are a welcome start in replenishing our water supplies, but they're only the beginning of a months-long recovery process. Despite the precipitation, parts of New England remain abnormally dry, with some areas still facing moderate to severe drought conditions.

That's why it's critical to use water wisely. Conserving now ensures we have enough for drinking, fire protection, and public health, especially as water demand rises in the spring.

Here are a few easy ways to help:

- Fix leaks promptly.
- Shorten showers to save gallons every day.
- Run full loads in your dishwasher and washing machine.
- Turn off the tap when brushing teeth or washing dishes.
